

SUMMARY

Business Analyst with 3+ years of experience across Healthcare SaaS, Fintech, Industrial Operations, and Public Safety domains. Currently managing multiple concurrent product projects, owning end-to-end business analysis delivery from discovery through UAT sign-off while collaborating directly with international clients. Contributed to a fintech platform that processed over 6 lakh transactions worth ₹4,000 crore within five months of launch. Experienced in Agile/Scrum environments, serving as a Product Owner and translating ambiguous business goals into clear, delivery-ready requirements for cross-functional teams.

CORE SKILLS

Business Analysis	Requirement Elicitation · BRD / FSD / SRS · User Stories & Acceptance Criteria · UAT Planning & Execution · Process Mapping
Product & Delivery	Product Ownership · Backlog Management · Scrum Facilitation · UML Diagrams · Wireframing · Risk Assessment
Data & Reporting	SQL (Joins, CTEs, Window Functions) · Power BI · Advanced Excel · KPI Design & Reporting
Tools & Platforms	JIRA · Confluence · Figma · MS Office Suite

PROFESSIONAL EXPERIENCE

- Tech Exactly · Business Analyst

March 2026 – Present

 - Managing multiple concurrent product projects owning the full delivery lifecycle from requirement elicitation through to client UAT sign-off.
 - Translate ambiguous client briefs into structured BRDs, FSDs, SRS documents, UML diagrams, wireframes, and product roadmaps ensuring zero misalignment between client expectations and development output across all active projects.
 - Function as Product Owner managing backlogs, facilitating sprint ceremonies, writing and prioritising user stories, and keeping every sprint aligned to agreed client goals in Agile/Scrum environments.
 - Engage directly with international clients and end users for discovery and feedback, then translate inputs for dev teams eliminating interpretation gaps at both ends of the delivery chain.
- Sai Paramount IT Solutions · Business Analyst

July 2024 – March 2026

 - Led BA delivery on a BBPS-integrated bill payment platform defining end-to-end transaction flows for 10+ payment categories and ensuring full RBI regulatory and BBPS compliance throughout the build.
 - Defined requirements for a first-of-its-kind real-time rent payment feature via Credit Card using IMPS, eliminating delays from traditional payment methods and expanding the platform's addressable user base.
 - Drove process improvements in requirement documentation and delivery coordination and contributing to shorter UAT cycles, reduced rework, and fewer production defects, resulting in approximately 30% improvement in operational efficiency.
- GEEMSCO Consultancy Services Pvt. Ltd. · Business Analyst

March 2023 – July 2024

 - Supported requirement gathering, functional documentation, and stakeholder coordination across multiple IT initiatives assisting development teams in translating business needs into structured deliverables.
 - Performed data analysis using SQL and Excel to support KPI reporting and business decision-making; assisted with UAT planning, defect tracking, and release coordination.

KEY PROJECTS

- BBPS Fintech Platform — Sai Paramount IT Solutions

 - 6 lakh+ transactions worth ₹4,000 Crores processed within 5 months of go-live. Gathered and documented requirements for a BBPS-integrated bill payment platform covering 10+ payment categories including electricity, mobile, DTH, FASTag, LPG, insurance, and loan repayments.
 - Defined requirements for a first-of-its-kind real-time rent payment via Credit Card (IMPS) and an instant cashback and referral rewards engine translating complex business incentive models into functional specifications for the development team.
 - Coordinated with development, QA, and compliance teams to ensure adherence to RBI regulations and BBPS standards covering data encryption, privacy requirements, and secure payment gateway integration.

WasteOps — Industrial Waste Management SaaS — Tech Exactly

- Defined requirements for a multi-tenant SaaS platform digitising bin services across large industrial and infrastructure sites replacing paper-based processes with GPS-validated, QR-scanned, photo-evidenced field operations.
- Specified that each bin service generates an immutable record with GPS coordinates, timestamped photos, and cryptographic hash chaining for legal defensibility ensuring the platform is audit-ready by design.
- Mapped the full operational lifecycle tenant onboarding, schedule creation, route assignment, CAPA management, incident reporting, and EHS compliance reporting into structured user stories across Phase 1 with architecture designed to scale internationally.

Dailok — AI-Powered Mental Health Support App — Tech Exactly

- Elicited and documented requirements for a clinician-controlled AI mental health support app (iOS & Android) providing 24/7 assistance in Arabic and English operating strictly within a doctor-approved knowledge base to ensure clinical safety and prevent out-of-scope responses.
- Defined crisis detection and safety protocol requirements a permanently visible Kill Switch and automated crisis keyword detection in both Arabic and English triggering instant emergency redirection across the mobile app and an integrated WhatsApp AI bot.
- Specified a four-tier subscription model (Guest, Free, Basic, Premium) via RevenueCat (Apple & Google billing), covering AI voice calls, mood tracking, journaling, assessments, and direct doctor VoIP calling — alongside full admin panel and WhatsApp bot requirements.

Galway Safe App — Passive Mobile Safety App — Ireland · Tech Exactly

- Defined requirements for a passive safety application commissioned by the Western Region Drug and Alcohol Task Force, Galway silently monitoring vulnerable users' locations across geofenced danger zones near water between midnight and early morning.
- Specified a three-state alert response flow (Fine / Need to Talk / Emergency) with automated SMS alerts to emergency contacts including live location links, and pre-dialled rescue services ensuring the app functions as a reliable safety net with zero required user action.
- Documented privacy-first on-device architecture requirements no backend, no login, no external database balancing operational safety with strict data privacy obligations for a clinically vulnerable population

E2P Motorsports — Event Communication Mobile App — Tech Exactly

- Defined requirements for a mobile event communication platform (iOS & Android) replacing WhatsApp and email as E2P Group's primary channel across Racing, Training, and corporate driving events with role-based participant and admin-controlled onboarding.
- Specified a five-tab event interface and full event lifecycle management from Draft through Completed or Cancelled, including access controls across public, approval-gated, and invite-only corporate events.
